

In general, Henderson RMD recommends top hung hardware, but should the overhead support not be strong enough to carry the door weight, then a bottom roller specification is required. Refer to section 'C'. This Guide to Quantities is only applicable for data sheets B130 to B210.

SPECIFICATIONS AND QUANTITIES

If the weight of the door is unknown, the weight can be calculated using the table overleaf. Having determined the weight, turn to the section index – data sheet B10, and select the appropriate data sheet – B130 to B210 – and identify the components required. Using the tables below, select the application and opening width to determine the appropriate quantity of components required.

Notes:

- 4000mm and 6000mm lengths not available in all sizes of track and channel.
Refer to data sheets B130 to B210 for lengths available in each product.
- The following opening widths allow for types 52 or 53 hangers fitted to the stile of the door.
Other hangers fitted in from the edge of the door will allow a slightly wider opening for the quantities and lengths shown.*
